

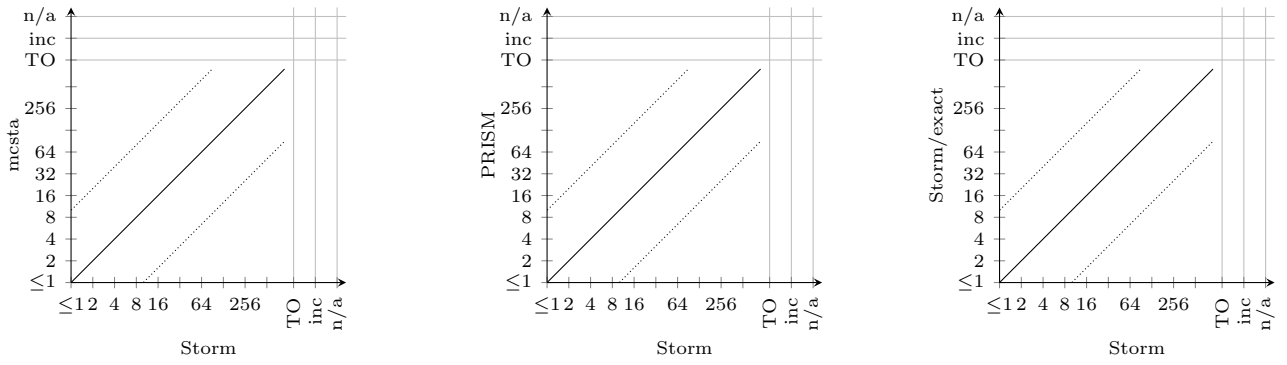

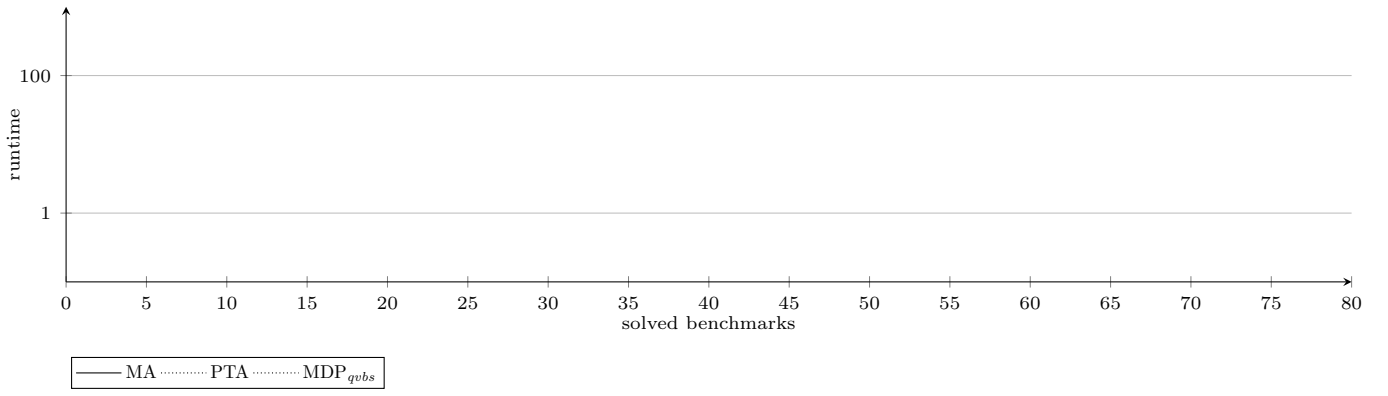

Figure 1: Comparison of Storm, Storm/exact, mcsta and PRISM. Top: quantile plot of the runtimes. Bottom: runtime of the other configurations against Storm. Points marked *TO* ran out of time or memory, *inc* produced an incorrect result, and *n/a* produced no result or were not applicable.

Tool comparison

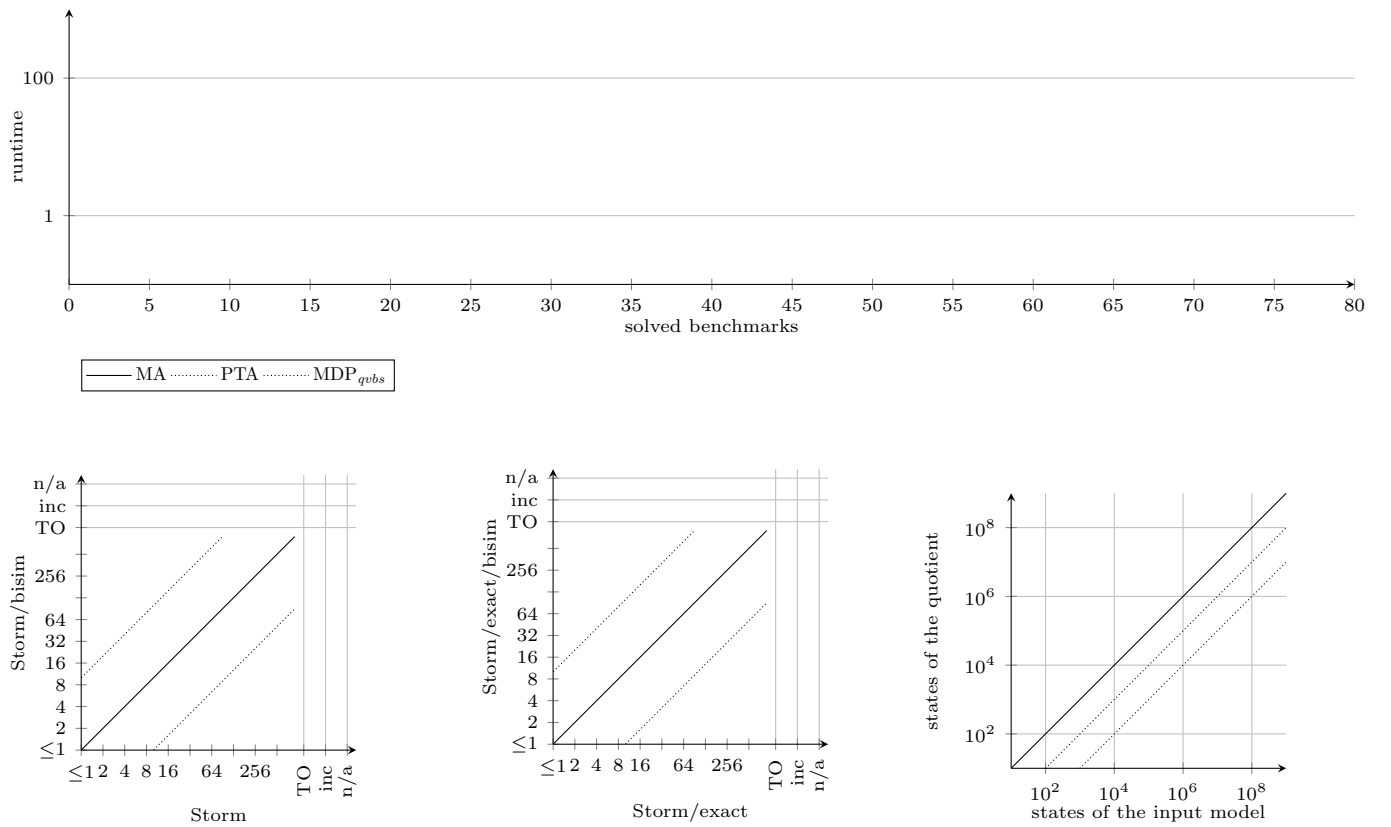

Figure 2: Effect of bisimulation minimisation. Top: quantile plot of the runtimes with and without minimisation. Bottom left and middle: runtime with against runtime without minimisation. Bottom right: size of the input model against the size of the bisimulation quotient computed by Storm/bisim.
